

Computer Talent Search

A project of the Institute of IT Professionals South Africa

Ph: 021-448 7864 • Fax: 021-447 8410 • PO Box 13013, MOWBRAY, 7705 • info@olympiad.org.za • www.olympiad.org.za

TALENT SEARCH 2015

SENIOR: Grades 10 and 11

Not to be used before 16 March

If you are NOT in grade 10 or 11, please report that you have the wrong paper.
Only when the teacher says “START”, may you begin.

1. Write your personal details and your answers on the answer sheet provided.
2. You will have 45 minutes to complete the 15 tasks.
3. You may answer the questions in any order, but it is important to place the answer in the correct line on the answer sheet.

The mark allocation is as is used in Europe for these competitions.

You get 45 marks to start off with.

A section: +6 marks for every correct answer -2 for every wrong answer.

B section: +9 marks for every correct answer -3 for every wrong answer.

C section: +12 marks for every correct answer -4 for every wrong answer.

If you do not answer a question, you get 0 (zero) for that task.

The maximum mark is 180.

Wait for the teacher to say “START”.

A1: Beavers on the Run

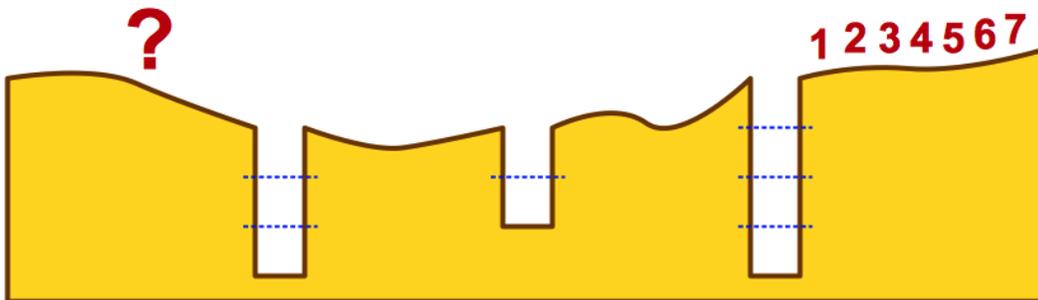

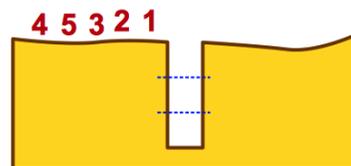

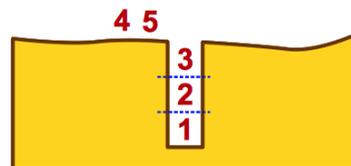

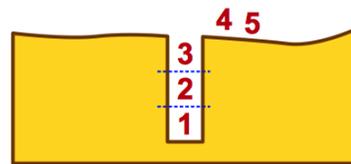

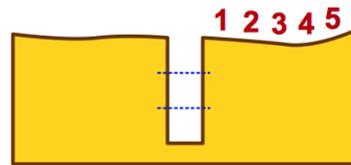

A colony of beavers is travelling through a dark forest. The path is narrow, so they travel in a row without passing each other.

Sometimes there is a hole in the path. A hole is passed in the following manner:

- First as many beavers jump into the hole as can fit in.
- The entire colony will then pass across the hole.
- The beavers that jumped in will then climb out, and join the end of the line.

The images on the right show how five beavers pass a small hole that fits three beavers.

A colony of 7 beavers passed through the forest. They pass over 3 holes. The first hole fits 4 beavers, the second fits 2, and in the last hole fits 3 beavers.

In what order do the beavers find themselves after they have passed the third hole?

Write down the letter of the correct answer only in the correct block on your answer sheet:

- A: 4 7 5 6 1 2 3
- B: 6 5 7 4 3 2 1
- C: 2 1 6 5 3 4 7
- D: 5 7 6 1 4 3 2

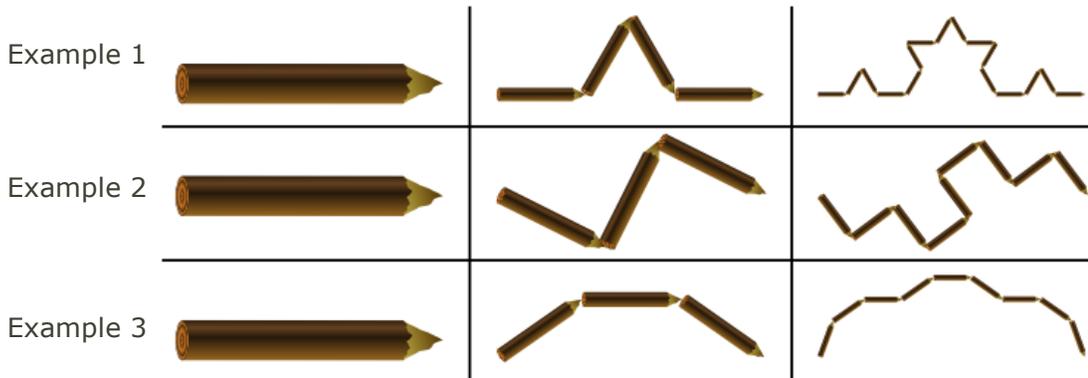

A2: Log Art

IA3 / SA2 / EA2

When beavers gnaw on tree trunks they enjoy placing the pieces in a special way.

The beavers start with a single log. In stage one a big log is gnawed into smaller logs. In the next stage each individual log is again gnawed into even smaller logs but always keeping to the starting pattern. This keeps repeating.

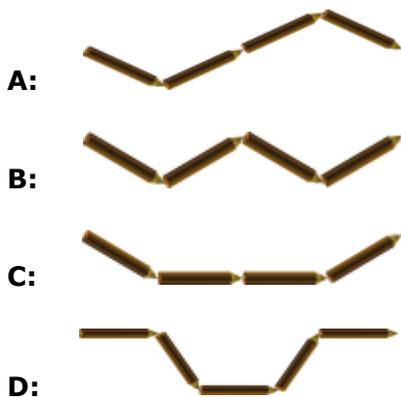

Here are three examples. On each line you see how the beaver started, the result after stage one and the result after stage two.

If the result of the second stage looks like this:

What was the result of the first stage? Write down the letter of the correct answer in the appropriate space on your answer sheet.

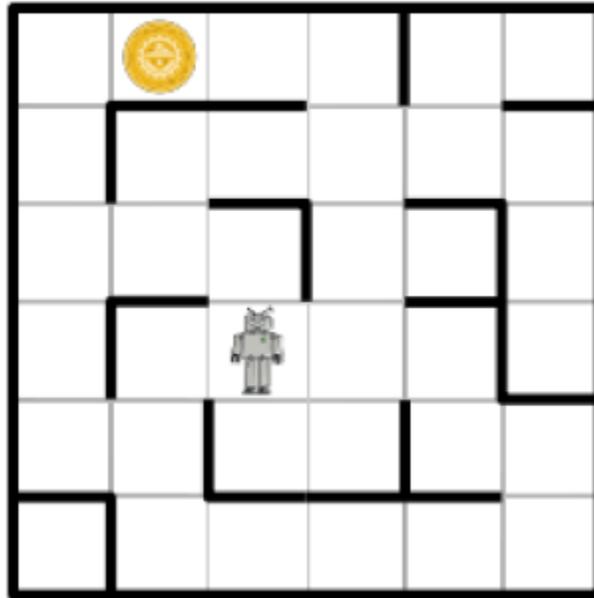

A3: Space Maze

SA3 / EA3

Some space explorers went to an uninhabited planet. From their ship they had seen a maze with an unknown golden object in it.

The explorers dropped their robot into the maze hoping it could take a closer look at the unknown object. Unfortunately the robot broke during the fall and can now only send and receive garbled instructions about where to go.

The explorers know that the robot can obey the following instructions: poS, Ha', nIH, and vl'ogh.

They know that the instructions mean:

"Go one square North", "go one square South", "go one square East", or "go one square West". However they do not know which is which.

Which instruction was the one that got the robot to the golden object?

- A: Ha', poS, poS, Ha', Ha', nIH
- B: Ha', poS, poS, Ha', nIH, Ha'
- C: Ha', Ha', poS, Ha'
- D: Ha', poS, nIH, vl'ogh, Ha', poS

Write down the letter of the correct answer in the appropriate block on your answer sheet.

A4: Loading Lisas

JB4 / IB1 / SA4

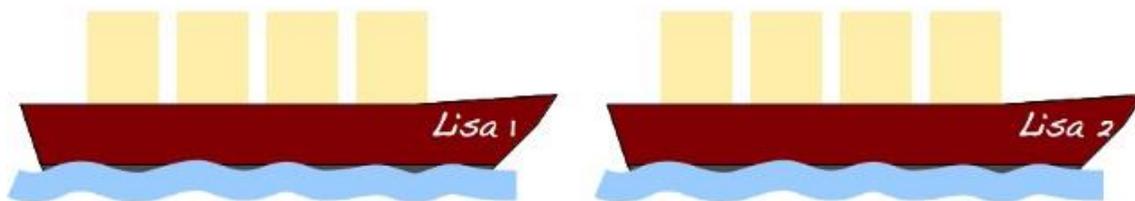

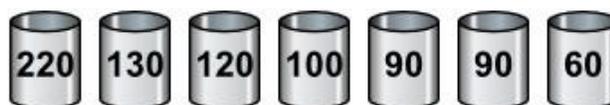

Two fishermen own two boats, named "Lisa 1" and "Lisa 2". Each boat can hold a maximum cargo of 300kg.

The fishermen are given barrels filled with fish to transport. On each barrel is a number that shows how heavy the barrel is in kilograms.

You must transport as much fish as possible, but make sure that neither boat carries more than 300kg.

Write down the number of the boat and the cargo it will carry in the appropriate space on your answer sheet.

Eg: 1 : 130 + 120, 2 : 90 + 90 + 60

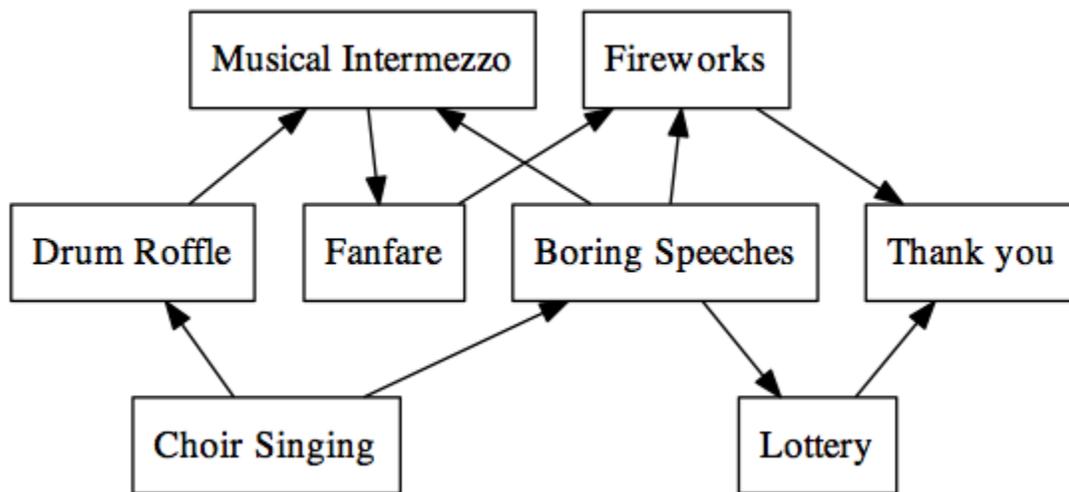

A5: Ceremony

IB4 / SA5 / EA4

Organizing a festive day is a lot of work in Bebras City. All the events on the programme must occur in a specific order.

The diagram shows all the events that must be included. The arrows indicate that an event has to occur before another event. For example, the *Musical Intermezzo* can only happen after both the *Drum Raffle* and the *Boring Speeches* have finished.

In which order must the events come? Place the letter of the correct answer in the appropriate block on your answer sheet:

- A: Musical, Fireworks, Drum, Fanfare, Speeches, Thanks, Choir, Lottery
- B: Drum, Fanfare, Speeches, Musical, Choir, Lottery, Thanks, Fireworks
- C: Fireworks, Lottery, Thanks, Speeches, Drum, Choir, Fanfare, Music
- D: Choir, Drum, Speeches, Musical, Fanfare, Lottery, Fireworks, Thanks

B1: Footprints

SB1 / EA5

Footprint-trees are made by stepping in the sand in a special way:

The instructions for a **1-tree**:

Step forward 1 step to make one footprint, go back in your own prints.

When you know how to make a 1-tree, you can learn how to make a **2-tree**:

Step forward 2 steps to make two footprints.

Turn left and make a 1-tree.

Turn right and make a 1-tree.

Go back in your own prints.

It is easy to explain how to create a **3-tree** because a 3-tree consists of 2-trees.

Step forward 3 steps to make three footprints.

Turn left and make a 2-tree.

Turn right and make a 2-tree.

Go back in your own prints.

In a similar way you can create a **4-tree**.

Which of the following trees is a proper 4-tree? Write A, B, C or D in the appropriate block on your answer sheet.

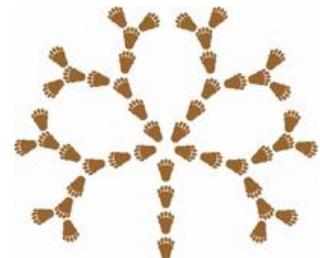

A

B

C

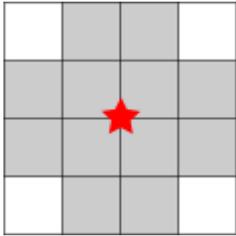

D

B2: Village Network

JC2 / IB5 / SB2

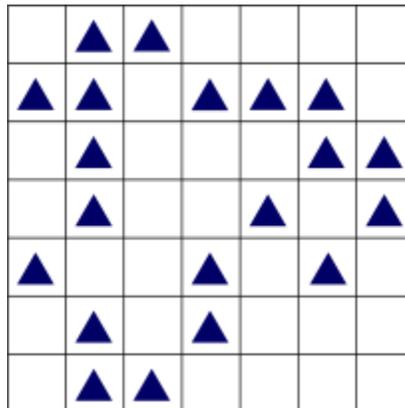

A village is receiving a new wireless network consisting of several network towers. The network will offer WiFi to all the villagers.

Every network tower has the coverage area shown below. The star represents the network tower. Only in the twelve shaded squares surrounding the tower will a house get a WiFi signal.

The picture shows a map of the village divided into squares. Every triangle ▲ represents a house.

A network tower cannot be built inside a square, only on the cross point of the village squares. The coverage areas may overlap.

What is the minimum number of network towers required to provide coverage to every house?

Enter the number in the appropriate box on your answer sheet.

B3: Mobile Phones

JC3 / IC1 / SB3

The beaver family have three mobile phones but none of the batteries have any charge.

It takes 1 hour to fully charge a mobile phone but this does not need to be done all in one go.

The beaver family only have two mobile phone chargers in the house.

What is the shortest time they need to fully recharge the three phones? Write down the letter of the correct answer in the appropriate block on your answer sheet.

A: 3 hours

B: 2 hours

C: 1½ hours

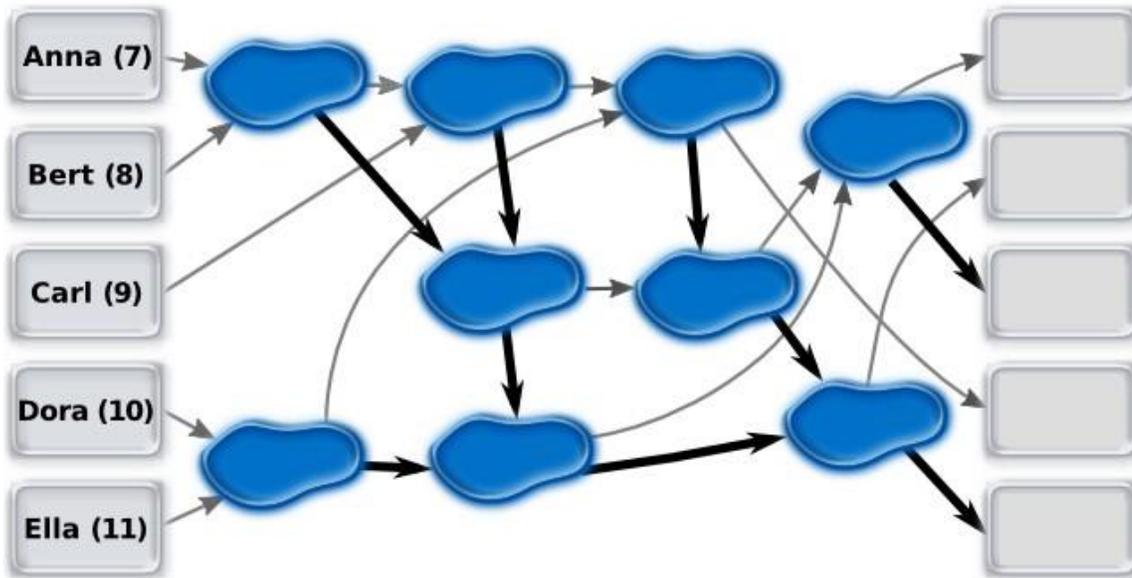

D: 1 hour

B4: Puddle Jumping

SB4 / EB1

Anna (age 7), Bert (age 8), Carl (age 9), Dora (age 10) and Ella (age 11) are playing a game where they jump from puddle to puddle.

They have placed arrows between the puddles, and they all start on the left side as indicated.

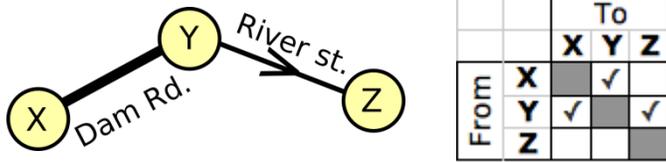

When a child jumps into a puddle he or she waits for a second child to arrive. The older child in the puddle will then jump according to the thick arrow, the younger follows the narrow arrow.

Which is the order (top to bottom) in which the children will end on the right? Write the letter of the correct answer in the appropriate block on your answer sheet.

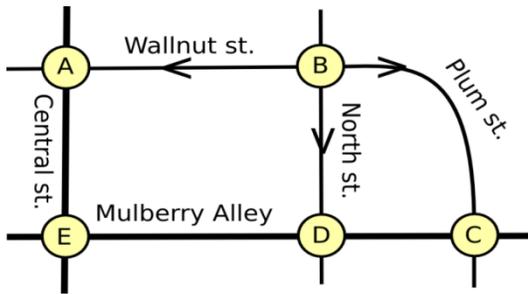

- A: Bert, Dora, Ella, Anna, Carl**
- B: Bert, Dora, Carl, Anna, Ella**
- C: Ella, Anna, Carl, Dora, Bert**
- D: Carl, Anna, Dora, Bert, Ella**

B5: Traffic in the City

In a small village there is a one-way street and a two-way street. In order to help the village taxi driver a table is made to show which routes can be taken. Below is the map and the corresponding table.

Beaversville is a little larger and also wishes to have a table for its taxi drivers:

Which one of the tables below is the correct one for Beaversville? In the appropriate place on your answer sheet, fill in the letter of the correct table.

A

	A	B	C	D	E
A					✓
B	✓		✓	✓	
C				✓	
D			✓		✓
E	✓			✓	

B

B	✓		✓		✓
C	✓			✓	
D	✓		✓		✓
E	✓			✓	

C1: Stormproof Network

IC2 / SC1 / EB2

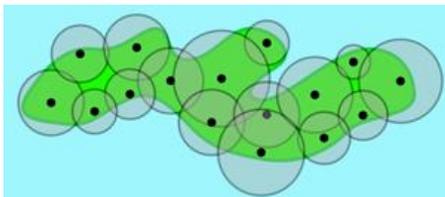

A network of mobile phone towers is set up on a small island. Every tower covers a circular area of the island.

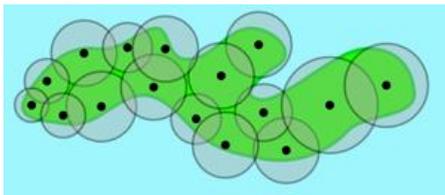

When the coverage area of two towers overlaps the towers are said to be directly connected. Towers can also be indirectly connected if there is a chain of directly connected towers between the two towers.

The operators want to make the network of towers Storm Proof. This means that even if one tower breaks down all other towers must still be connected, either directly or indirectly.

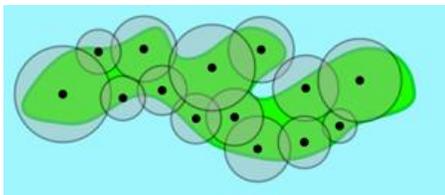

Which is a way to create a stormproof network on the island? Enter the letter of the correct solution in the appropriate block on your answer sheet.

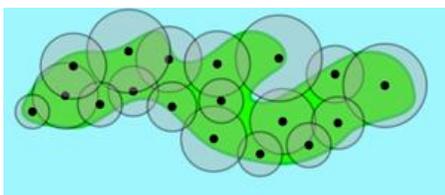

A

B

C

D

C2: Best Translation

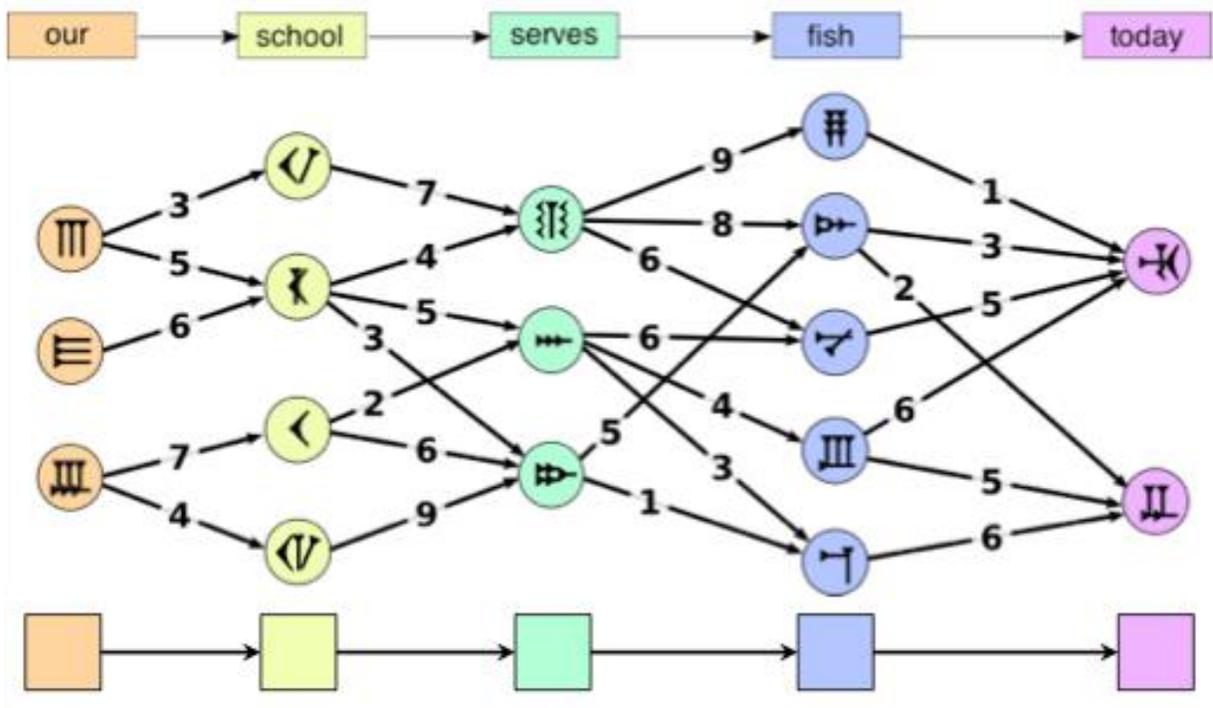

SC2 / EC1

Betty is trying to translate an English sentence into an ancient language. Every word translates into an ancient symbol. There are several possible symbols for each word. Betty wants to find the best translation.

Under each English word Betty has written down the possible ancient symbols. Between each pair of symbols, she has inserted a number, indicating how well they fit together in that order. (A higher number means a better fit.)

The best translation would be the five symbols which together produce the highest total maximum score.

Betty has prepared the translation of 'our school serves fish today'

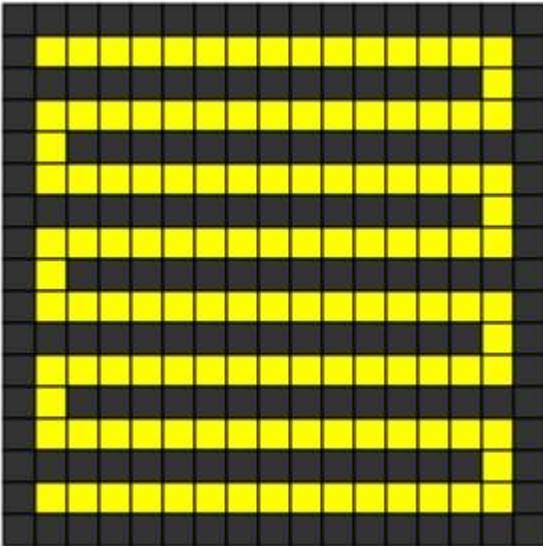

What is the highest possible total score she can get? Write down the number in the appropriate block on your answer sheet.

C3: Monster

JC4 / IC3 / SC3

A monster lives in a room in the basement under a castle. The rooms in the basement are as shown as yellow/white blocks in the map below:

You have to find the monster. Your only help is the old lock-keeper, but when you show him a room on the map, and ask "Is this the right room?" he only answers either "Search towards the first room" or "Search towards the last room"

What is the least number of questions you can ask before you are sure you have the right room? Write down the number in the appropriate block on your answer sheet.

C4: Right Rectangles

SC4 / EC5

A robot has been programmed to draw rectangles. It can execute the following instructions:

Orange	draw an orange line of length 1
Black	draw a black line of length 1
Turn	turn 90° clockwise

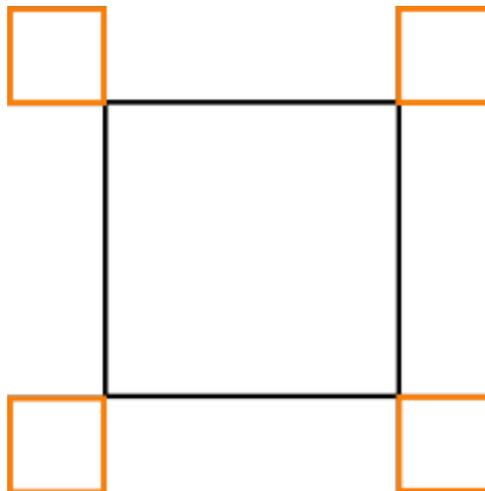

NB. A black line of length (Black) 1 is much longer than an orange line with length (Orange)1.

If you are using a monochrome print-out, the orange will appear as grey.

Besides those simple instructions the robot can also execute complex instructions by combining instructions. If A and B are instructions (either simple or complex) the robot can do:

A, B	first execute A and then execute B
$n \times (B)$	execute B n -times

The robot must draw the following:

Which set of instructions does **NOT** result in the requested drawing?

Write down the letter of the correct answer in the appropriate block on your answer sheet.

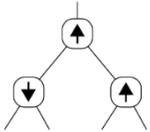

- A:** 4 x (2 x (Orange, Turn), Orange, 3 x (Black), Orange, Turn)
- B:** 4 x (2 x (Orange, Turn), 3 x (Black), 2 x (Orange, Turn))
- C:** 4 x (3 x Black, 3 x (Orange, Turn), Orange)
- D:** 4 x (Black, 3 x (Orange, Turn), Orange 2 x (Black)).

C5: Broken Machines

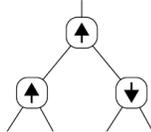

SC5 / EC4

Hilda constructed three machines, which were all supposed to output the second largest value from a list of four numbers.

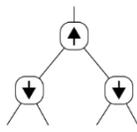

Machine 1

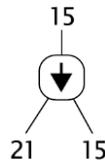

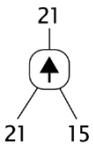

Machine 2

Machine 3

The machines can use two different components, called '*max*' and '*min*'.

'*max*' takes two values and outputs the largest. '*min*' takes two values and outputs the smallest.

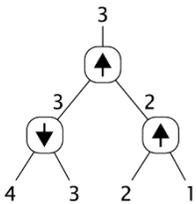

In other words, if numbers represented by a , b , c and d are input to a machine in this order, the results would be as follows:

Machine 1: outputs $\max(\min(a,b), \max(c,d))$

Machine 2: outputs $\max(\max(a,b), \min(c,d))$

Machine 3: outputs $\max(\min(a,b), \min(c,d))$

For example, if Hilda inputs the numbers 4, 3, 2, 1 into Machine 1, the output she will get is 3, which is indeed the second largest value:

However, as she continued working with the devices she quite quickly realized that none of the machines actually work. In fact, she only needed to try two number combinations in order to discover this.

Which of the following combinations did she use to prove none of the machines work?

- A: 1, 2, 4, 3 and 2, 3, 4, 1**
- B: 2, 1, 3, 4 and 2, 3, 4, 1**
- C: 1, 4, 2, 3 and 2, 3, 4, 1**
- D: 1, 4, 2, 3 and 4, 1, 2, 3**

Write down the letter of the correct answer in the appropriate block on your answer sheet.
